Pred. No. is the number of results predicted by chance to have a score greater than or equal to the score of the result being printed, and is derived by analysis of the total score distribution.

A; Title: A complete sequence of the mitochondrial genome of the Western lowland gorilla.
A; Reference number: Z17269; MuID:96212991; PMID:8676744
A; Reference number: Movember 1995
A; Rocession: A59154
A; Residues: 1-459
A; Note: this translation is not annotated in GenBank entry GGMITG, release 114.0
A; Note: the termination resulting from transcript polyadenylation is shown

ALLOWARD dehydrogenase (ubiquinone) (EC 1.6.5.3) chain 4 - dog mitochondrion (fragment) C, Species: mitochondrion Canis lupus familiaris (dog)
C, Date: 16-Jul-1999 #sequence_revision 16-Jul-1999 #text_change 09-Jul-2004
C, Accession: T11502
R, Kim, K.S.; Lee, S.E.; Jeong, H.W.; Ha, J.H.
Wol. Phylogenet. Evol. 10, 210-220, 1998
A, Tritle: The complete nucleotide sequence of the domestic dog (Canis familiaris) mitocho A, Reference number: Z17276; MUID:99097286; PMID:9878232
A,Accession: T11502
A,Accession: T11502
A,Accession: T11502
A,Residues: nucleic acid sequence not shown; translation not shown; translation of shown; translation
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   A;Molecule type: DNA

Pred. No. is the number of results predicted by chance to have

Listing first 45 summaries

Database:

Post-processing: Minimum Match 0% Maximum Match 100%

Pred. Mo. is the number of results predicted by chance to have a score greater than or equal to the score of the result being printed, and is derived by analysis of the total score distribution.

Patent No. 6551795

GENERAL INFORMATION:

TITLE OF INVENTION:

NUCLEIC ACID AND AMINO ACID SEQUENCES RELATING TO PSEUDOMONAS

TITLE OF INVENTION:

TITLE OF INVENTION:

APPLICATION NUMBER: US/09/252,991A

CURRENT FILING DATE: 1999-02-18

PRIOR APPLICATION NUMBER: US 60/074,788

PRIOR APPLICATION NUMBER: US 60/074,788

PRIOR FILING DATE: 1998-02-18

PRIOR FILING DATE: 1998-02-18

NUMBER OF SEQ ID NOS: 33142

LENGTH: 235
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      ö
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   Gaps

No. is the number of results predicted by chance to have a score greater than or equal to the score of the result being printed, and is derived by analysis of the total score distribution.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              Sequence

Pred. No. is the number of results predicted by chance to have a score greater than or equal to the score of the result being printed, and is derived by analysis of the total score distribution.

C,Comment: This enzyme is generally dimeric and has broad substrate specificity. It has
gradation of chitin cell wall by endochitinases.

No. is the number of results predicted by chance to have a score greater than or equal to the score of the result being printed, and is derived by analysis of the total score distribution.
                                                                                                                                                                                                                                                                                                                                                                                                                                1825181
